 <p>Brain Reverse Engineering and Imaging Laboratory</p>	<p>■ Contact information</p> <p>Professor : ITC building 511 TEL : 042-350-3490 Lab. : ITC building 521 TEL : 042-350-8172~4 Website : http://brain.kaist.ac.kr</p>
<p>■ Current state of the Lab. (in 2023 Fall Semester)</p> <p>PhD Students: 10 Master's Student: 9 Staff: 3</p>	
<p>■ Research Areas</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">  <p>functional MRI analysis</p> </div> <div style="text-align: center;">  <p>Super Resolution</p> </div> <div style="text-align: center;">  <p>Brain Stimulus Interpretation</p> </div> </div> <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;">  <p>Semantic Embedding</p> </div> <div style="text-align: center;">  <p>Medical Image Generation</p> </div> <div style="text-align: center;">  <p>Anomaly detection</p> </div> <div style="text-align: center;">  <p>Image Enhancement</p> </div> </div> <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;"> <p>Linguistic Intelligence</p> <ul style="list-style-type: none"> - Natural Language Processing - Visual Question and Answer </div> <div style="text-align: center;">  </div> <div style="text-align: center;"> <p>Visual Intelligence</p> <ul style="list-style-type: none"> - Object Tracking - Super Resolution - Medical Imaging - Image Generation </div> </div> <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;"> <p>Brain Decoding</p> <ul style="list-style-type: none"> - functional MRI analysis - Brain Stimulus Interpretation </div> <div style="text-align: center;"> <p>Neuromorphic Algorithm</p> <ul style="list-style-type: none"> - Spiking Neural Network </div> </div> <p style="text-align: center;">Brain Reverse Engineering and Deep Learning</p> <p>Our laboratory aims to understand how the brain functions and use the knowledge to build an artificial brain close to human brain performance. In the Visual Intelligence group, we study computer vision, including object tracking, super resolution, and medical imaging. In the Brain Decoding group, we carry out research using fMRI and EEG to understand the brain, including studies on human emotion decoding and reconstruction of arm movement. Linguistic Intelligence group conducts research in natural language processing such as dialogue system and semantic embedding. Finally, the neuromorphic engineering group seeks to improve current technologies by drawing inspiration from the brain.</p>	
<p>■ Recommended courses & Career after graduation</p> <p>We recommend laboratory candidates to take Introduction to Brain IT and coursework in machine learning, information theory, and signal processing. We have Ph. D graduates (postdoc at Samsung medical center, CTO at Omnious, etc.) and graduates with master's degree (Samsung DMC Lab, Lunit, LG, ETRI, Hynix, Hyundai Motors, UCL Wellcome Trust Centre for Neuroimaging, Ph. D candidates, CEO of Omnious and bHaptics, etc.).</p>	<p>■ Introduction to other activities besides research</p> <p>Professor Dae-Shik Kim is currently serving as the director of SHINSEGAE I&C-KAIST AI Research Center and Kyobo/Dplanex-KAIST AI Center for Future of Insurance. In our Laboratory, we freely share and socialize cultural life such as MT, dining, sports and birthday parties.</p>
<p>■ Introduction to the Lab.</p> <p>Our laboratory conducts studies that lead the current flow of science and technology. We are actively engaged in cutting-edge research in areas such as deep learning, neuromorphic engineering and brain decoding, enriched by active collaboration with leading groups. Striving for excellence and innovation, we have entered the DARPA Robotics Challenge with the HUBO laboratory KAIST and dispatched our members for overseas research at Cambridge U.K, UCL, Leiden (Netherlands), EPFL (Switzerland), and Stanford. Alongside collaborating with top authorities in the industry and academia, we also nurture a venture spirit that has led to the establishment of successful venture startups such as Omnious and bHaptics.</p>

■ Current state of the Lab. (in 2023 Fall Semester) Postdoctoral Fellows : 2 PhD Students: 16 Master's Student: 12	
■ Research Areas We are Video & Image Computing Lab at KAIST. Our research of interest includes deep-learning-based computer vision, computational image & video processing as well as image & video understanding and 2D/3D video coding. Recently, our intensive works are in the fields of image/video super-resolution, frame interpolation, SDR-to-HDR inverse tone mapping, optical flow estimation, depth estimation, image deraining, image dehazing, video motion deblurring, neural radiance field (NeRF) learning of images and video, image in-painting, GAN-based restoration of old photos, PAN sharpening and super-resolution of satellite images, deep-learning-based image/video compression, learning-based perceptual video coding, detection and classification of SAR image targets etc.	
■ Recommended courses & Career after graduation EE432 Digital Signal Processing EE474 Introduction to Multimedia EE534 Pattern Recognition Recent Alumni: Adobe, Qualcomm, ChungAng Univ. Prof, Samsung (SAIT, VD, MX), Naver, ADD .etc	■ Introduction to other activities besides research Birthday parties Organizational strengthening activities Health training with non-professional trainers Gapcheon bike riding

	Website	https://sites.google.com/view/kaist-roboticslab	
■ Current state of the Lab. (in 2023 Fall Semester)			
Postdoctoral Fellows : 0 PhD Students: 3 Master's Student: 10			
■ Research Areas			
Physical Interaction with Aerial Manipulators			
<p>By mounting a manipulator on a multi-rotor, an aerial manipulator can perform active tasks through physical interaction. However, its application is limited due to the limited payload of the aerial manipulator and the coupling between the floating base and the manipulator. To this end, studies on the collaboration of multiple aerial manipulators, fully-actuated multi-rotors, and trajectory optimization have been conducted so that the aerial manipulator can interact with the environment stably.</p>			
Dual-arm Robot Intelligence			
<p>We are developing perception, planning, and control techniques for the intelligence of dual-arm robots. This includes skills such as: 1) manipulation planning, which allows the robot to plan where to grasp and place the unseen object, 2) compliance control, which allows both arms to safely interact with the environment, 3) grasp detection, which allows the robot to know which part of an object can be grasped using a deep vision network.</p>			
Model-based Robot Control & State Estimation			
<p>One of our primary research interests is the development of safe human-robot physical interactions. For this purpose, we conduct research on torque-controlled robots and state estimation techniques. The robot's compliant motion behavior is achieved through precise torque control. In addition, for contact estimation, proprioceptive sensors are used to estimate the contact points and forces.</p>			
■ Recommended courses & Career after graduation			
<p>Recommended courses: Control system engineering, Linear Systems, Nonlinear Control, Optimization Techniques, Machine learning</p>		<p>Career: The practical / theoretical experience gained in the robotics lab is applicable to a wide range of engineering careers (both academia and industry).</p>	
■ Introduction to other activities besides research			
<p>Our lab holds regular events such as outing, dinner parties, to maintain a strong bond between members. Also, there are private groups that share personal hobbies such as sports and cultural life.</p>			
■ Introduction to the Lab.			
<p>In our laboratory, students who are academically curious and full of self-motivation gather to create a synergistic effect in robotics research. The professor's kind advice and full research support are at the center of it. Our lab provides the best environment for students who want to study responsibly in an atmosphere of freedom.</p>

■ Current state of the Lab. (in 2023 Fall Semester)

Postdoctoral Fellows : 1 PhD Students: 25 Master's Student: 7

■ Research Areas (RP: Recent Publication)

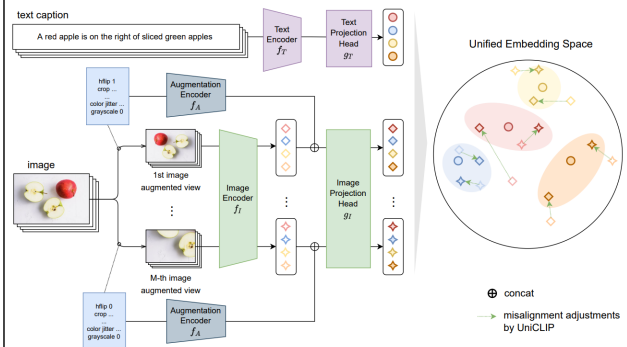

As many students are enrolled in our laboratory, various research topics are being conducted as below

- Continual Learning(RP: ECCV 2022, ICCV2023)
- Human Pose Estimation(RP: ICCV 2021)
- Depth Estimation(RP: IROS 2022, AAAI 2021)
- Representation Learning(RP: NeurIPS 2022)
- Domain Adaptation/Generalization(RP: ICRA 2022)
- Hyper-parameter Tuning(RP: ECCV 2022)
- Generative Model(RP: [Best Paper] CVPRW 2022)
- Point Cloud, 3D model(RP: ICCV 2021)
- Augmentation Strategy
- Deep Learning Theory(RP: ICCV 2021)
- Fairness

In addition, you can freely choose topics in areas of interest, and there is a lot of collaboration between the students in the lab.

(Figure 1) Overview of DLCFT (Continual Learning)

(Figure 2) Overview of UniCLIP (Multi-modal Representation Learning)

■ Recommended courses & Career after graduation

Recommended courses: AI & Computing course

Career after graduation(2020~): LG AI Research, SAIT, Samsung Research, NAVER CLOVA AI, etc.

■ Introduction to other activities besides research

- Birthday party(monthly)
- MT, Various activities(movie, ping-pong, ...)

■ Introduction to the Lab.

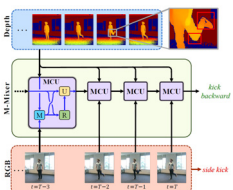

In our lab, students study in a field of interest in a very free atmosphere. Team meetings are held every two weeks in the lab, and students choose a team to attend according to the research topic they are interested in. Also, many students are conducting internships at research center, and start-up such as NAVER, LG AI Research, KAKAO, and ETRI. In addition, the lab is conducting projects with various companies and incentives are paid according to the amount of participation in the project.

■ Recent research achievements (2020-2023)

2023: CVPR 3, ICCV 2, AAAI 1, ICRA 2, WACV 1, ICIP 3

2022: NeurIPS 1, ECCV 2, IROS 2, UAI 1, ICIP 2, CVPR 1, ICRA 1, WACV 1, ACSAC 1

2021: ICCV 3, ICRA 1, CVPR 1, WACV 1, AAAI 3

	<p>■ Contact information Professor : changick@kaist.ac.kr TEL : 042-350-7421 Lab. : suminlee94@kaist.ac.kr TEL : 042-350-7521 Website : https://cilabs.kaist.ac.kr/</p>
<p>■ Current state of the Lab. (in 2023 Fall Semester) Postdoctoral Fellows : 0 PhD Students: 16 (full-time) / 8 (part-time) Master's Student: 8</p>	
<p>■ Research Areas</p> <p>▶ Adversarial Attack & Defense</p>  <ul style="list-style-type: none"> Protecting AI systems against malicious users who tries to fool the system. Creating adversarial perturbations exploited in real-world physical environments. <p>▶ Image segmentation</p>  <ul style="list-style-type: none"> Human face parsing & body part segmentation. Exploring diverse research topics (e.g, domain adaptive or few-shot segmentation). <p>▶ Long-Tail Recognition</p> <ul style="list-style-type: none"> Resolving the data imbalance problem in machine learning Important for real world applications such as wild animal classification <p>▶ Short-term Weather Forecast</p> <ul style="list-style-type: none"> Predicting total precipitation image for Korean Peninsula Presenting new Total Precipital Water (TPW) benchmark <p>▶ Action Detection and Anticipation</p>  <ul style="list-style-type: none"> Discriminating relevant actions for online action detection. Forecasting unseen future actions from the pseudo action labels obtained by online action detection. <p>▶ Video Understanding</p>  <ul style="list-style-type: none"> Understanding actions in a video based on multiple modalities. Localizing an object of an action. 	
<p>■ Recommended courses & Career after graduation We recommend taking courses related to computer vision (CV) and deep learning. Depending on your area of interest, the courses of computer graphics and signal processing can be helpful. Those are not mandatory but it would be better to get used to computer vision and deep learning. About career, based on steady research and various industry-academic cooperation experiences, you can have great research capabilities and industrial adaptability.</p>	<p>■ Introduction to other activities besides research Smooth teamwork must precede innovative research. With this conviction, through outside activities, we build feelings of empathy and compassion for each other, and recharge our energy for research. We celebrate birthdays every month to make good memories of our lab life. Also, on fine days, we go on a picnic together. If you would like to see more pleasant memories of ours, please visit our homepage.</p>
<p>■ Introduction to the Lab. Professor Kim has advised his students at KAIST since 2005 and serves as the head of the Center for Security Technology Research. The mission of the CI Lab. is to analyze computer vision systems and develop the systems for various applications. Our lab collaborates with many industries and institutions to perform innovative research work and has published our research in top-tier conferences and journals.</p>	
<p>■ Recent research achievements ('21~'23)</p> <ul style="list-style-type: none"> 15 top-conference papers (CVPR, ECCV, ICCV, and etc.) 8 international journals (TPAMI, IJCV, and etc.) 	

■ **Contact information**

Professor : 2111, LG Innovation Hall (N24) TEL : 7417
 Lab. : 2105, LG Innovation Hall (N24) TEL : 7617
 Website : <https://sites.google.com/site/kaistssslab/>

■ **Current state of the Lab. (in 2023 Fall Semester)**

PhD Students : 4 Master's Student : 4

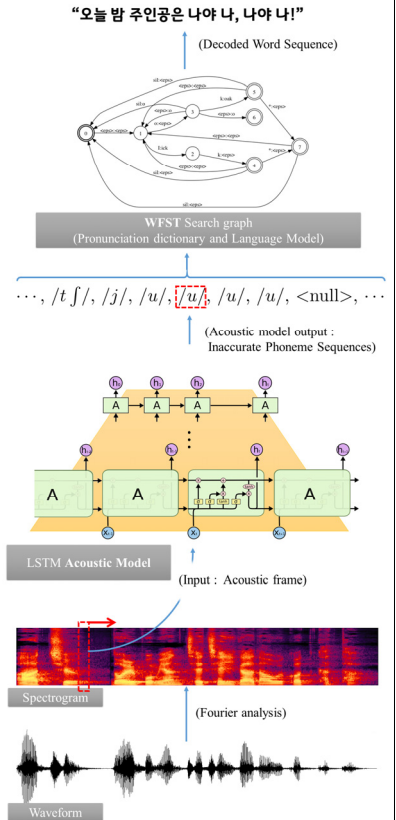

■ **Research Areas**

SSSCLAB has been researching machine learning and deep learning for speech and sound signals. In recent years, with the advance of smart devices & AI, our research fields have attracted much interest day by day.

Speech recognition is a technology that converts human speech into words or sentences. We are also studying **speech synthesis** technology (familiar as **TTS**) that generates a human-like voice from any text. They help humans communicate with computers or machines naturally.

In addition, we have studied natural language processing-based **language modeling** to complement the syntactic consistency of recognized strings and **speaker recognition** to recognize the user's identity. We are also studying **voice conversion** technology that mimics a specific speaker's voice as felt non-artificial.

There are many interesting researches such as **speech enhancement** that restores noisy speech to clean, **wake-up word detection** (ex. Hey Siri, OK Google), **voice activity detection**, **speaker diarization**, **acoustic event detection**, etc.

Current Research Projects

- Research on Unified Interactive Learning Schemes of End-to-End Speech Recognition and Synthesis based on Deep Learning of Speech Chain Mechanism
- Development of Voicepishing Prevention Technology Based on Speech and Text Deep Learning
- Development of Speech Technology for Machine Learning Diagnosis of Cognitive-Affective Disorder Patients

■ **Recommended courses & Career after graduation**

- Recommended : Signals and Systems, Digital Signal Processing, Probability and Random Processes, Linear Algebra, Information Theory, ML or DL related course.
- Alumni have been entering IT companies, research institutes, or universities. (Samsung Electronics, Samsung Research, LG Electronics, etc.)

■ **Introduction to other activities besides research**

Through summer MT, welcome party, year-end party, and homecoming day, we promote friendship among students. In addition, we encourage attendance at domestic/international conferences in related fields, so that students can get various research experiences.

■ **Introduction to the Lab.**

SSSCLAB was founded in 2000 and carries out various projects related to speech and sound signal processing. We accumulate rich practical experience achieving excellent academic research results. Also, we provide stable and strong financial support and a comfortable research environment so that students can continue their studies and research activities. SSSCLAB has produced out 11 Ph.D. and 29 Master graduates for 20 years.

<p>Postdoctoral Fellows : 0 PhD Students: 14 (Full) 2 (Part) Master's Student: 7</p>			
<p>■ Research Areas</p>			
<p>Generic AI via integrating vision, Language, and speech</p>			
<p>Generic AI via integrating vision, language, and speech vision and language analysis is an emerging research subject in the IVY Lab, where AGI deep learning approach is our current research interest. We investigate various new algorithm and devise novel network structures to analyze vision, language, and speech. Current research works include vision language co-learning, visual prompt learning, visual speech language translation, and low resource deep learning. Some of our research results have been published in international journals (such as IEEE TIP) and international conferences (such as CVPR, ICCV, ECCV, AAAI, ICASSP, etc.).</p>			
<p>Multi-modal learning in Deep Learning</p>			
<p>IVY Lab research the principle of multi-modal data analysis (video, audio, language, etc). Recently, we investigate the characteristic of multi-modal data, fusion method and adversarial robustness. Our research interests include adversarial robustness with multi-modal data (RGB, IR, Hyper-spectral, etc), multi-modal data relation/causality, and learning representation of multi-modal data.</p>			
<p>Robust and Explainable Deep learning</p>			
<p>Current research interest on deep learning-based processing is to design robust networks and further disclose them for explanation, which are strongly demanded in the defense/security applications. Deep learning-based studies for attention network, adversarial learning, generative model, and explainable AI have been done on secure-required image data. Currently, we are conducting deep learning researches for analyzing robustness and interpretability of deep neural networks.</p>

<p style="text-align: center;">CVPR 2022</p>			
<p>■ Recommended courses & Career after graduation</p>			
<p>Recommended courses include probability, digital signal processing, machine learning, introduction to multimedia, image processing/computer vision, various programming courses. Graduates have jobs in various places such as professor, post-doc (EPFL, TUM, GIT, CMU, META), national research institutes (ETRI, ADD, KIST), and companies (Samsung, LG, Naver, Hyundai, SKT, etc.)</p>			
<p>■ Introduction to other activities besides research</p>			
<p>IVY Lab regularly holds common activities such as mountain tracking, summer/winter MT, etc. Please see various activities in http://ivylab.kaist.ac.kr/base/Gallery/Gallery.php</p>			
<p>■ Introduction to the Lab.</p>			
<p>IVY laboratory is currently focusing on Vision-Language research. Our lab has achieved outstanding achievements such as this year's Science Prize (Association of Scientific Journalists), Best Paper Awards, and IT Mark. The researchers have strong bonds with each other, and they help/encourage each other while researching and living in an autonomous atmosphere with stable support. We also encourage students to have research experience in an international sense through visiting research with world-class research institutes (e.g., University of Toronto, Technical University of Munich, Ecole Polytechnique Federale de Lausanne, FAIR, CMU, Amazon, etc.) in our interesting research field.</p>			
<p>■ Recent research achievements (21-`23)</p>			
<p>- We have published 149 SCI journal papers (SCI-indexed, referee peered), 347 International conference papers (referee peered). In the recent 3 years, 20 AI top tier conferences (CVPR, ICCV, ECCV, NeurIPS, AAAI, etc) have been published. Recent AI top tier publication: https://ivylab.kaist.ac.kr/base/Publication/toptier.php</p>

<p>■ Current state of the Lab. (in 2023 Fall Semester)</p> <p>Postdoctoral Fellows : 0 PhD Students: 4 Master's Student: 5</p>	
<p>■ Research Areas</p> <p>< Acquiring Big Data from Brain ></p> <p>Imaging Brain Activity With genetic engineering, neurons can be modified to change their brightness as a function of their activity (i.e., neurons "blink" as they fire) which makes the brain activity visible. The main challenge is to record the optical signals at a high spatiotemporal resolution and we develop optical imaging techniques to tackle this.</p> <p>Computational Imaging The performance of imaging systems is impacted by a range of factors, including physics, biology, information theory, and the sampling theorem. To mitigate these limitations, we're utilizing computational imaging methods that leverage machine learning to predict more information from limited data.</p> <p>Multiplexed Imaging Fluorescence microscopy is limited to imaging only four proteins simultaneously due to the broad emission spectra of fluorescent molecules. To surpass this limitation and visualize a larger number of proteins, we are developing multiplexed imaging technologies that use machine learning algorithms for blind signal separation.</p> <p>< Analyzing Big Data from Brain ></p> <p>Neuro-image Processing State-of-the-art functional imaging methods generate more than a gigabyte of data per second, necessitating the development of automated analysis algorithms. We develop fast and scalable machine learning algorithms capable of processing such brain images without the need for labeled data.</p> <p>Neuro-data Mining Neural activity underlies many functions in our brain, but our understanding of the fundamental principles of neural signal processing remains limited. To gain greater insight, we apply computational methods to analyze brain activity data and quantify information flow, uncovering the functional connections between neurons. Our aim is to identify repeating patterns, discover local circuits that operate together, and extract synaptic strength information from brain activity, leading to a deeper understanding of the brain.</p>	 <p>Imaging brain activity of live animals</p>  <p>Multiplexed imaging</p>  <p>Neuro-image processing</p>  <p>Neuro-data Mining</p>
<p>■ Recommended courses & Career after graduation</p> <p>Recommended courses Signals and Systems (EE), Digital Signal Processing (EE), Machine Learning (CS), Linear Algebra (MA), Optics (PH), Biomedical Optics (ME), Biophotonics (BiS), Brain Science Fundamentals (BIS)</p> <p>Career All experiences and knowledge acquired during the graduate study can be directly transferred and applied to many data scientist positions and biomedical jobs (both academia and industry).</p>	<p>■ Other activities besides research</p> <p>NICA members communicate with each other through lab dinners and strawberry parties. Lab members maintain good relationships through outside activities on a regular basis.</p>
<p>■ Introduction to the Lab.</p> <p>Our mission is to develop optical and computational technologies for brain and biomedical applications. More specifically, we think of a brain as a circuit that consists of neurons and devise new strategies to reverse engineer this circuit – through imaging/analyzing brain activity/structure. We are looking for the prospective students who are (a) self-motivated and (b) eager to explore new things.</p>

■ **Contact information**

Professor : Joon Son Chung **TEL :** 042-350-2114
Lab. : Multimodal AI Lab (N24 #3102)
Website : <https://mmai.io>

■ **Current state of the Lab. (in 2023 Fall Semester)**

Postdoctoral Fellows : 2 PhD Students: 5 + 5 (integrated) Master's Student: 10

■ **Research Areas**

● **Sound Source Localization**

As humans have intuitive understanding of the direction of sound when perceiving visual scene. By focusing on cross-modal alignment of visual and auditory information and leveraging learning-based approach, we achieve high localization performance.

● **Sign Language and Gesture Recognition**

Sign language includes complex features to sufficiently understand the meaning. Therefore, we attempt to extract multiple features without the need for additional annotations.

Our self-sufficient learning framework and thereby achieves the state-of-the-art performance.

● **Talking Face Generation**

Generating a talking face video plays a crucial role in human-computer interactions and can be applied to diverse fields. We construct a method that generates a natural-looking talking faces with fully controllable facial attributes and accurate lip synchronization

● **Keyword Spotting**

(a) Trained only on the GSC dataset. (c) Pre-trained on the LSK dataset, then fine-tuned on the GSC dataset.

We explore a task of discovering keywords spoken by humans. By leveraging user-defined keyword spotting and metric learning, we produce the state-of-the-art performance in the domain. We also propose a novel dataset corresponding to the task.

■ **Recommended courses & Career after graduation**

Recommended Courses

- Signals and Systems (EE202)
- Programming Structure for Electrical Engineering (EE209)
- Digital Signal Processing (EE432)
- Special Topics in Electronic Engineering: Deep Learning for Computer Vision (EE488)

■ **Introduction to other activities besides research**

Our Lab highly encourages social events including strawberry party, internal workshops, and sports. All lab members including foreign students and interns are open to active participation.

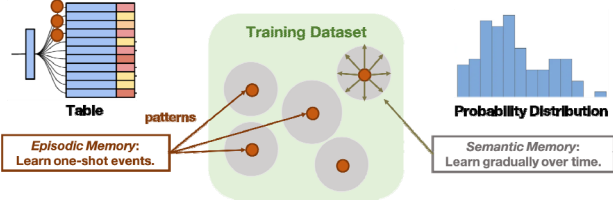

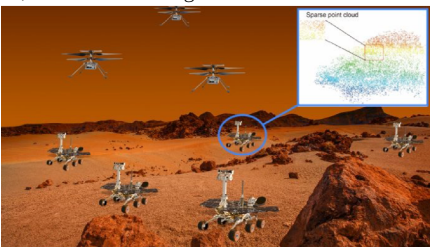

■ **Introduction to the Lab.**

Multimodal AI (MMAI) Lab develops numerous ideas based on multi-modal data. With the help of Artificial Intelligence, we aim to solve various tasks by fundamental understanding of multi-modality, an extension of single modal approach such as vision only, and audio only. We focus on augmenting the performance of existing tasks by the multi-modal approach and exploring more in-depth researches based upon the combination of various information. Any motivated students in machine learning, visual, and auditory information are welcomed.

■ **Recent research achievements ('22~'23)**

- 1 paper at ACM International Conference on Multimedia 2023 (ACM MM)
- 1 paper at International Conference on Computer Vision 2023 (ICCV)
- 2 papers at Interspeech 2023
- 4 papers at International Conference on Acoustics, Speech, and Signal Processing 2023 (ICASSP)
- 1 paper at British Machine Vision Conference 2022 (BMVC)

<p>■ Current state of the Lab. (in 2023 Fall Semester)</p> <p>Postdoctoral Fellows : 0 PhD Students: 6 Master's Student: 3</p>	
<p>■ Research Areas</p> <p>Smart Sound System Laboratory pursues better understanding and rendering of spatial audio through AI-based technologies and audio signal processing. We study audio signal processing, AI-based audio scene analysis, diagnosis, and audio generation models to realize truly immersive audio experience. Our research topics cover Metaverse Audio (virtual reality, augmented reality, extended reality audio), and Auditory Information Analysis such as Speech Enhancement and Separation, Direction-of-Arrival estimation, Room Impulse Response estimation, Room Geometry Inference. Sound-based Anomaly Detection and Fault Diagnosis is another major research topic in our Lab.</p> <p>[Highlights]</p> <ul style="list-style-type: none"> - SOTA in DNN-based Multichannel Speech Enhancement [DeFTAN-II] - 7th place, in 2023 DCASE Sound Event Detection & Localization - Inventor of Personal Audio Technology for Automotive Vehicles <p>[Theories]</p> <ul style="list-style-type: none"> - Audio signal processing, Multichannel signal processing - Sound propagation, Spatial perception of sound - Anomaly detection, out-of-distribution detection <p>[Applications]</p> <ul style="list-style-type: none"> - Audio Metaverse, Audio AR/VR/XR - Speech Enhancement and Separation, DoA Estimation using DNN - Sound-based Environmental Parameter Generation and Estimation - Beamforming, Sound Source Localization - Intelligent Audio System with Environmental Awareness - Machine Anomaly Detection and Fault Diagnosis with AI 	<div style="text-align: center;">  <p><Metaverse Audio Recording></p> <p>Deep neural network</p>  <p>Multi-channel reverberant sounds → Dry sound</p> <p><Audio & Speech Signal Processing using AI></p>  <p><Room shape inference from sound></p>  </div>
<p>■ Recommended courses & Career after graduation</p> <p>We recommend signal processing based courses (Signals and systems / DSP), Deep learning-related courses. After graduation, you can further develop your career in IT companies & research centers, as well as sound & vibration control industries (such as Samsung Research, ETRI, Naver, Gaudio). You can also work in a wide range of fields, including Electric / Defense science, etc.</p>	<p>■ Introduction to other activities besides research</p> <p>Lab members frequently engage in yoga, ping-pong matches, and learning musical instruments. Through the organization of yearly membership training workshops and field trips, we actively facilitate the cultivation of camaraderie among members. Our laboratory fosters a regulation-free environment, striving to empower our members' creativity and self-motivation.</p>
<p>■ Introduction to the Lab.</p> <p>The field of intelligent audio signal processing is a multidisciplinary field that enables the blending of signal processing technologies with machine-learning approaches, sound propagation theories, and insights into human sound perception. The driving force of the lab is the spirit of embracing challenges to explore new ideas guided by a profound intuition for signal processing. Collaborative research on top-notch immersive audio technology is underway, with the support of consistent funding, in partnership with KISTI, ETRI, and Samsung Electronics.</p>

<p>■ Current state of the Lab. (in 2023 Fall Semester) *New faculty member as of August 2023.</p>	
<p>■ Research Areas control systems, stochastic processes, machine learning</p>	
<p>■ Recommended courses & Career after graduation</p> <p>*coding background: Python, MATLAB.</p> <p>*course background: calculus, ODEs, linear algebra, introductory machine learning, basic probability.</p> <p>*[Bonus] coding background: C++, ROS, working on GPUs.</p> <p>*[Bonus] course background: any control theory / control engineering course.</p> <p>*[Bonus] hardware background: robots/drones, motion capture system.</p> <p>Bonus backgrounds are not strictly required. Self-motivation and a determination to learn new skills is more important.</p>	<p>■ Introduction to other activities besides research</p> <p>My biggest motivation for being an engineer comes from movies! When I was a kid, I was inspired by the robots in Wall-E, especially EVE.</p> <p>If you want to help me build real-life autonomous systems like EVE, consider joining my lab :)</p> 
<p>■ Introduction to the Lab.</p> <p>We develop intelligent and efficient methods for control, estimation, and decision-making of stochastic systems. Our main applications include networked systems: traffic management of unmanned (aerial) vehicles, multi-agent robotics, and distributed sensor networks.</p> <p><u>Heterogeneous Memory for Decision-Making.</u></p> <p>We study the patterns of a system and design rules to determine what to store in memory and how to store them. By taking inspiration from the human brain, heterogeneous memory structures encode information in a diversity of ways (e.g., semantic versus episodic memory). Applications include autonomous robotic systems, reinforcement learning.</p>  <p><u>Topology of Multi-Agent Systems.</u></p> <p>We design ways to abstract the topology of a complex real-world network into spatial patterns (e.g., tessellations) to achieve faster communication and more optimal resource allocation. Applications include large-scale flow networks: vehicle congestion control, air traffic management and UAV formation-flight.</p>  <p><u>Distributed Data-Gathering with Feedback.</u></p> <p>We take inspiration from the human nervous system to improve distributed data-gathering algorithms: feedback channels are established from the processor to the individual sensors, enabling prediction and redundancy-reduction. Applications include problems where large-scale wireless communication is important: collaborative mapping of an unknown environment, multiagent target-tracking, distributed sensing and decision-making.</p>
