PURPOSE AND OBJECTIVES

The SAP HANA Database is the basis for new, ground-breaking SAP applications and is widely agreed to be a highly valuable asset in the SAP software portfolio. In-memory computing is made possible through recent technology advances in main memory, multi-core processing, and data management. It leverages technology innovation to establish real-time analysis of business data and combines both transactions and analytics to improve existing business processes with a dramatic increase in performance. The SAP HANA Database as basis for the in-memory computing shows enormous promise as a key driver for the SAP market of the future.

The SAP HANA Database team develops an engine that performs parallel in-memory processing of huge data sets to offer extremely fast real-time responses for analytic queries.

An essential part of this team is the Quality Assurance team, which is responsible for the SAP HANA DB Development Support and the quality of the SAP HANA DB. As quality specialist in SAP Hana database development you will support customers and stakeholders in close collaboration with our core database developers.
